

Mission Ballroom

CONCERT VENUE

Project: Mission Ballroom
Partners: AEG

Location: Denver, CO
Completion: January 2019

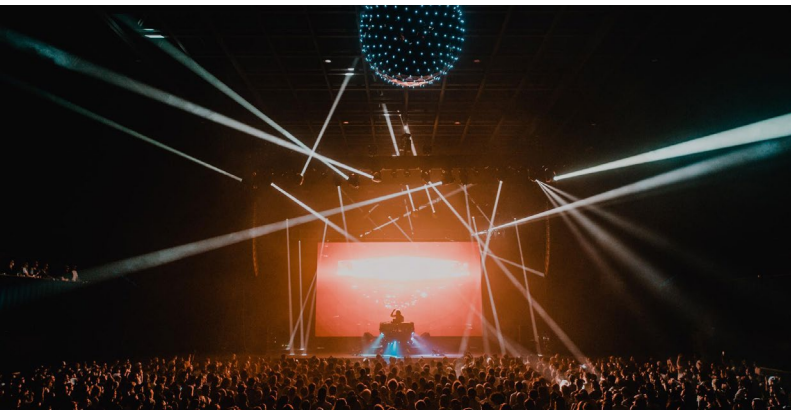

Scope: Inspired by the iconic natural amphitheater Red Rocks, Mission Ballroom is a state-of-the-art music venue in Denver's chic, industrial River North neighborhood that draws a mix of hip hop, indie and mainstream bands to the Mile High City. Sightline Commercial Solutions contributed to the construction of the dedicated music space by building a 40' x 60' SC2003 rolling stage, which offers the ultimate in flexibility and convenient transport. It's a sleek, efficient solution that allows the venue to cater the space to the size of the crowd; because the audience can't see behind the stage, it provides the feel of a venue with full occupancy, no matter the audience size. Sightline Commercial Solutions also provided drum risers and custom speaker shelves, which hang off the front of the stage for optimal sound to resonate within the venue. After the venue opened to rave reviews, Sightline's enlarged the stage to 60' x 60' overall by adding another 20' x 60' non-rolling thrust.

The 40' x 60' stage can be made smaller to accommodate different event sizes, providing the feel of full venue no matter the occupancy.

A rolling stage offers flexibility and convenient transport for Mission Ballroom.

SC2003 rolling stage provided a sleek, efficient solution to cater the space to house 3,500 guests or just a few hundred.

Drum risers are used throughout Mission Ballroom and the custom speaker shelves hang off the front of the stage for optimal sound to resonate within the venue.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
