

Hope College

Higher Education

Project: Hope College
Architect: Stantec A&E
Partners: Architectural Glass & Metal
Location: Holland, MI
Contractor: Granger Construction
Completion: May 2017

Scope:

Hope College in Holland, MI, unveiled the 42,000 square-foot Jim and Martie Bultman Student Center – the college’s first new dedicated student-center space in more than 35 years. The center includes a large multipurpose room with an adjacent patio, a lounge with fireplaces for student gatherings, as well as meeting areas and a coffee shop. TCP’s minimalist Track Rail, along with tempered glass, maple hand rails and a matching maple top cap, offered the perfect railing system to give the space a sense of lightness and freedom – ideal for fostering community among students and campus organizations.

Trim was curved to the same radius as the railing. Custom jigs were created to fabricate the coping in-house.

Abaca’s uniquely designed panels and railing stand in stark contrast to the neighboring architecture.

Sightline’s work is incorporated throughout the building’s exterior, which includes more than 3,100 LF of railing.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
