

Kentucky Convention Center

Public Space

Project: Kentucky Convention Center **Location:** Louisville, KY
Architect: EOP + HOK **Contractor:** HUNT Construction
Partners: Cardinal Glass **Completion:** August 2018

Scope: In 2018, the Kentucky Convention Center completed a two-year, \$200+ million renovation and expansion, redefining the facility as a world-class public assembly venue in downtown Louisville. With over 200,000 square feet of exhibit space, it offers flexible meeting rooms, a large ballroom, and state-of-the-art amenities suitable for gatherings of different sizes. Increased exhibit space and meeting rooms, improved pedestrian flow and a clearly identifiable entrance with a spectacular glass façade are just a few of the major upgrades to this multi-purpose building. Track Rail glass railing provided by Sightline Commercial Solutions lines the grand staircase, large stair landing, ramps and overlooks, allowing natural light from the updated glass façade to flow through the multiple levels of the facility.

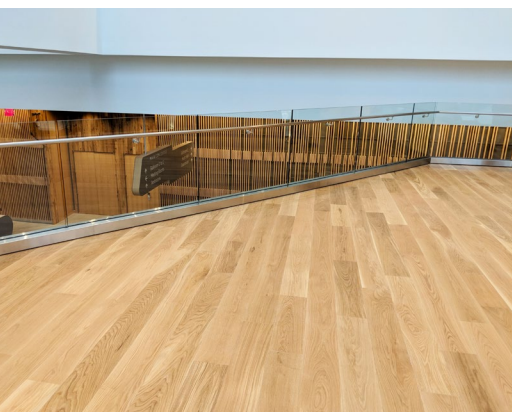

The grand staircase features integrated seating bleachers and Track Rail glass railing with stainless steel handrail.

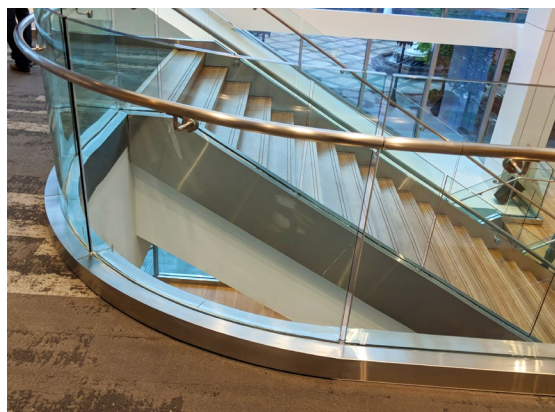

A wooden staircase guiding visitors to the second floor is lined with top mounted Track Rail glass railing.

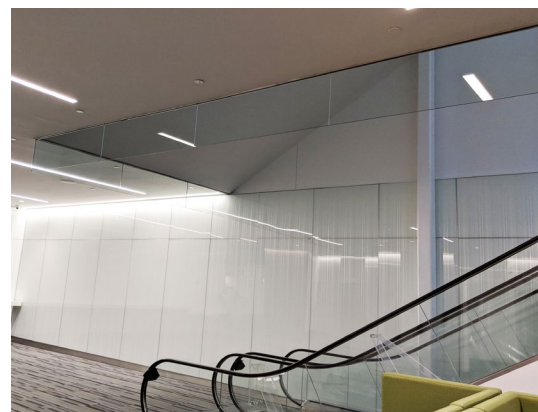

Custom fabricated sawtooth cladding conceals the base shoe and stringer along stairs and overlooks.

Railing with 13/16" clear tempered laminated glass surrounding the oversized stair landings allows for natural light.

The second-floor overlook features long runs of Track Rail glass railing with custom curved base shoe, cladding and handrail.

Smoke Baffle System is fastened to the stud wall and features 1/2" clear tempered glass with polished exposed edges.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
