

# Pete Matthews Coliseum, Jacksonville State University

## Basketball Arena

**Project:** Pete Matthews Coliseum      **Location:** Jacksonville, AL

**Completion:** August 2016

**Scope:** Seeking to breathe new life into a 41-year-old venue with a worn-out seating system and improve sightlines for fans, Jacksonville State University enlisted Sightline Commercial Solutions to supply a permanent seating riser. This project involved the assembly of raker beams, support columns, platforms, stair units, and architectural railings. The design also incorporated sections of seating that met ADA compliance standards, along with 1,000 linear feet of railings, band platforms, and intermediate stair treads complete with aisle railings. Remarkably, this high-speed project was completed in a record time frame, enabling the facility to open and operate as planned.

Sightline Commercial Solutions installed nearly 200 seating riser step units with handrail.

The arena now features improved sightlines, added safety features and a modern, sleek appearance.

1,000 linear feet of railing along the front and sides of the seating risers.

The design also incorporated sections of seating that met ADA compliance standards.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
