

Project: Lexington MOB
Architect: JCS Architects
Completion: July 2017

Location: West Columbia, SC
Contractor: McCrory Construction

Scope:

Situated adjacent to Lexington Medical Center, this five-story, 175,400-square-foot medical office building is the first in South Carolina to be awarded Leadership in Energy and Environmental Design (LEED) Silver Certification due to its sustainable and energy-efficient design. Strategically selected for its ability to enhance the permeation of natural light, Sightline Commercial Solutions' Southpark railing with clear glass infill is featured throughout the building's two-story atrium and monumental winding staircase. The circular overlook required bent glass, as well as one section of bent plexiglass at the top of the stairs. A custom-profile wood top cap provides a warm and welcoming finishing touch.

Top-mounted posts adorn both the stairs and overlook.

The custom-shaped wood top cap sets this railing system apart.

Clear tempered glass was utilized throughout the railing system.

Plexiglass was used in place of glass to accommodate the tight radius.

Clear glass infill panels allow for the passage of light within the space.

The top cap and stainless handrail take on a serpentine shape.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
