

Parish Episcopal School College

Project: Parish Episcopal School
Completion: June 2020

Location: Dallas, TX

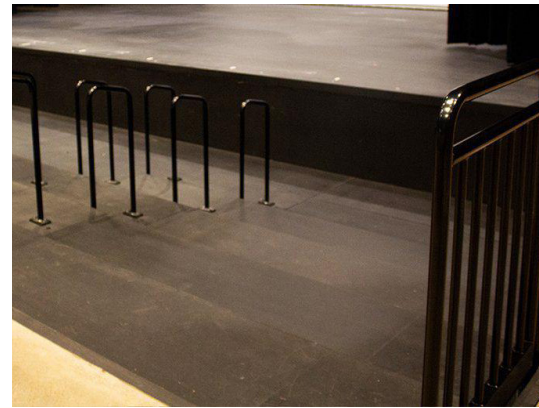

Scope: For years, Dallas' Parish Episcopal School adapted spaces or rented off-campus facilities for choral presentations, dance recitals, jazz band concerts, dramatic performances, and other live events showcasing student talent. As the college preparatory school celebrates its 50th anniversary this year, it's also commemorating the opening of the new 55,000-square-foot Noble Family Performing Arts Center on its Midway campus. Flexibility was key in the design of the new theater. After a careful review and assessment, Sightline Commercial Solutions recommended adding 36 Uplift® stages to serve as modular seating risers, a pit filler, and a stage extension. These customizable, scissor-lift platforms allow the facility – which also hosts community and cultural events, guest speakers, award ceremonies and Christmas pageants – numerous options for configuring the theater space. The Noble Family Performing Arts Center project represents our largest Uplift application to date. The platforms feature aluminum frames for maximum strength and long-term durability, are finished with a black HDPE finish, and can easily be reconfigured to fit any custom setting. Six IBC Guardrails placed at each end of the Uplift extension offer enhanced safety and character. Additional handrails are also available and can easily be added when the stage extension is converted into a tiered seating riser.

Platforms feature aluminum frames for maximum strength and long-term durability.

In less than two hours, the entire space can be transformed from a performance auditorium into a ballroom by raising the drill-operated Uplift platforms to create a flat floor extending from the stage to the front of the seating area.
