

**Project:** Gallatin High School      **Location:** Bozeman, MT      **Completion:** Summer 2020

**Scope:** In the summer of 2020, the new Gallatin High School in Bozeman, MT was completed featuring top-notch, dedicated learning, athletic, and performance spaces. To provide an ample backdrop to the school's auditorium and help present a welcoming performance setting, a customized Bravado® acoustical shell system was designed and installed.

The acoustical shell system includes six towers, three ceiling rows and one back wall – all featuring a beautiful cherry veneer finish. Overall, this design provides a flexible system for the stage manager and/or student participants to reconfigure as necessary. The back wall helps to reduce the space on stage and provide a clean and finished look behind the performers.

Student theaters benefit from easy to setup and easy to operate systems as limited staff members may be able to assist. Plus, it's great to have student involvement in productions both on and off the stage.

Now the entire auditorium at Gallatin High School is ready for some showstopping performances.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
