

Cleveland Browns Stadium

Football Stadium

Project: Cleveland Browns Stadium **Location:** Cleveland, OH
Partners: Cleveland Browns **Completion:** August 2023

Scope: Providing a close and captivating experience for spectators, sideline and end-zone seating sections have become increasingly popular due to their proximity to players and the action on the field. A prime example of this trend can be found at Cleveland Browns Stadium, where Sightline Commercial Solutions worked in tandem with seating provider DreamSeat to bring a unique gameday viewing experience to downtown Cleveland’s North Coast Harbor District. Using 3-D laser scanning technology, our team captured thorough and precise measurements of the sidelines and end zones and built the foundations for custom VIP seating systems using weather-resistant aluminum SC97 platforms and clear anodized IBC guardrail. Our team also installed camera platform areas with attachments for supporting field pads and mounts for securing DreamSeat’s chairs. Additionally, we fabricated field gates to match the stadium’s existing style. The successful execution of this project has led to additional work within the stadium and strengthened relationships with both the Browns and DreamSeat.

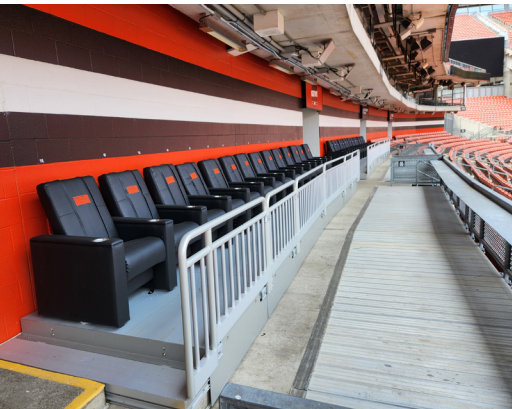

Endzone seating sections allow avid fans to get even closer to the action.

Weather-resistant aluminum SC97 platforms through the VIP seating area.

Sightline Commercial Solutions used 3-D laser scanning technology to capture precise measurements of the sidelines and end zone areas.

Areas with low utilization now serve a purpose as additional seating areas.

All railing and platforms were designed to match the stadium’s existing aesthetic.

Camera platform areas with attachments for supporting field pads.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
