

# Accenture in Salesforce Tower Office

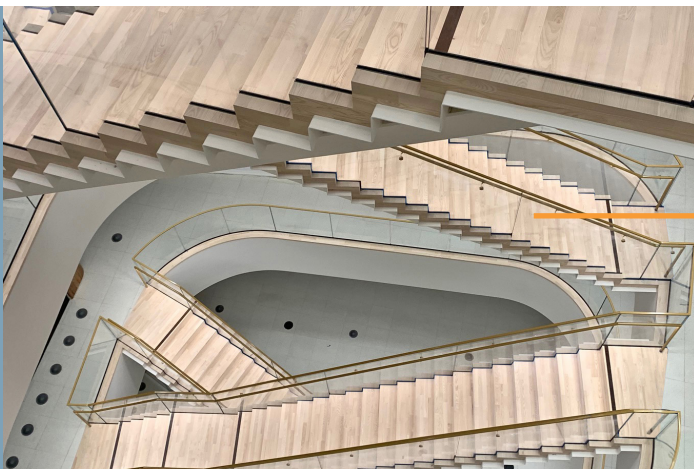

**Project:** Accenture  
**Architect:** Gensler - San Francisco  
**Completion:** October 2018

**Location:** San Francisco, CA  
**Contractor:** BCCI Construction

**Scope:** Consulting giant Accenture opened its new flagship hub in San Francisco's tallest building – Salesforce Tower. At the center of the 31st – 35th floor renovation is a stunning five-story staircase featuring sawtooth cut glass railing to match the rise of each stair, and shoe-mounted glass railing on accompanying overlooks. Aluminum handrails and top cap complement the building's contemporary aesthetic, while also providing added safety and ambiance via integrated LED lighting with an additional diffuser positioned on the underside of the handrail to achieve the desired look.

Aluminum, powder-coated handrails with an aluminum channel inset house the strip style LED lighting and conceal wiring. An additional acrylic diffuser was positioned on the underside of the handrail to achieve the desired look of continuous lighting.

We elevate places where experiences happen by providing innovative engineering, fabrication, and installation solutions to the most complex challenges. Discover our unconventional approach.
